[Specification Chart](#)

CROMMELINS Diesel Generators are low maintenance heavy duty industrial generators suitable for situations when it is not practical to have petrol powered generators such as mining, boating and marine applications, with the added benefit that diesel fuel is more economical than petrol. Diesel is also chosen for it's low flammability, low cost and stability over time.

Some models are available with electric start and long range fuel tanks.

All of our diesel generators can be built with an optional Hire Pack which consists of:

- Wheel Kit and Handles
- Central Lifting Bar
- Weatherproof Outlets
- Earth Leakage Switch
- Circuit Breakers
- Earth Spike and Lead
